

Dear FCC,I think that RM-10869, is not a good idea, why would we want to undo all the progress that you have already started in restructuring amateur radio, morse code is an old and not needed mode of communication when you have all the digital modes of communications which are more efficient during emergency communications for message traffic, Packet, RTTY and AMTOR are more efficient ways of communication than using morse code and having to dictate on paper by hand, you can print out all your message traffic with computers and packet, that is why the maritime vessels did away with morse code, because there are digital modes that are better, and this proposal is all wrong because it is not a fair way of testing, I am fully against this proposal.The person who submitted this petition has the wrong idea how amateur radio licensing should be restructured. The ARRL proposal RM-10867 is the best proposal that was submitted and the most logical.
